DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 22, 2004 has been entered.

Response to Arguments

- 2. Applicant's arguments filed November 22, 2004 have been fully considered but they are not persuasive.
- 3. Applicant argues that prior art does not teach or suggest the need or how to remove artifacts that are due to compression of video sequence (page 9 of the Remarks).
- 4. The Examiner disagrees. Simsic et al disclose above limitations as recited in previous office action in Fig.2.
- 5. Applicant argues that Simsic et al fails to teach or suggest providing a filter strength that is a function of motion activity within video sequence.
- 6. The Examiner disagrees. Simsic et al disclose above limitations in column 4, lines 52-65 (as presented previously in office action).

Furthermore, Applicant in page 9, second paragraph is relying on as to where is Simsic is directed. For example refers to an apparatus for filtering interlaced signals for

Application/Control Number: 09/731,474

Art Unit: 2625

presenting on a non-interlaced display device, and refers to different citation in Simsic to support it's position. The Examiner reminds the Applicant that none of the arguments, which were presented in page 9, paragraph 2 field November 22, 2004, are recited in claims. Accordingly the Examiner still believes that prior art as presented meet the claim language.

Claims 1-11, 13-48 are pending.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-4, 13-14 and 24-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simisic et al and in view of Cheung et al (US 6,178,205).

As to claim 1, Simisic et al disclose a decoder apparatus comprising: a video decoder configured to decode a received encoded video sequence (Fig.1 element 60); and a filter module coupled to the video decoder and the output and configured to filter compression artifacts from a decoded video sequence received from the video decoder (fig.2, element 76).

However, Simisic et al is silent about a filter module having a variable filter strength that is a function of detected motion activity within the video sequence.

But on the other hand, Cheung et al disclose a video post filtering with motion compensated temporal filtering and/or spatial adaptive filtering comprising; a filter

Application/Control Number: 09/731,474

Art Unit: 2625

module having a variable filter strength that is a function of detected motion activity within the video sequence (column 3, lines 40-61).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide the filter module having a variable filter strength that is a function of detected motion activity within the video sequence as thought by Cheung et al with the system of Simisic et al in order to improve video image quality and are applicable to video image.

As to claim 2, Simisic et al disclose filter strength is adjustable to one of a predetermined number of levels (column 8, lines 7-33).

As to claim 3, Simisic et al disclose the filter strength is adjustable to one of a high level, a medium level and a weak level (column 4, lines 52-66).

As to claim 4, Simisic et al disclose the medium level is a default Level (column 9, lines 42-56).

Claim 13-14, and 24-48 are similarly analyzed and rejected as claim.

Allowable Subject Matter

9. Claims 5-11 and 15-23 are allowed.

CONTACT INFORMATION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barry Choobin whose telephone number is 703-306-5787. The examiner can normally be reached on M-F 7:30 AM to 18:30.

Application/Control Number: 09/731,474

Art Unit: 2625
